Private pension funds outpaced state peers by assets in 2016 and will also outperform them by the number of policies by 2020

Russian pension system 2020 outlook

- **By 2019-2020, the insured by non-state pension funds (NPFs) will outnumber clients of the Pension Fund of Russia (PFR).** In terms of assets, NPFs have already left the PFR behind in 2016 and look set to adhere to an outstripping pension savings growth by 8.5% per year in 2017-2020, backed by deficit in the public pension system and the latter's reform. NPF assets growth will be capped by yet another pension savings "freeze", NPF market consolidation, and tighter Bank of Russia requirements for credit quality of private pension funds.
- **NPFs will replace up to RUB 350 bln of bank assets with stocks and bonds.** By regulatory requirements, starting July 1, 2018, private funds are to reduce their banking sector investment exposure from 40% to 25%. By ACRA's estimates, demand for Russian bonds and stocks may climb RUB 250-300 bln (3.3% of the market) and RUB 50-75 bln respectively.
- **NPFs' own funds adequacy will stand at minimal levels.** With the regulator deciding to run NPFs through the same stability assessment as the one other financial institutions are subject to, private pension funds will hardly strive to build up equity and are likely opt for keeping it at the minimum regulatory level instead. This will limit NPFs possibility to use capital as a preventive compensatory mechanism when private funds face deterioration in their asset portfolio credit quality.

Source: ACRA estimates

¹ Pension savings are made up by insurance contributions made by employers to the employee's funded pension within the mandatory pension insurance (MPI) framework, as well as by additional contributions under the State Co-Financing Program and by part of maternity capital intended for formation of the funded retirement pension.

² Pension reserves are formed from voluntary contributions by employers and/or employees.

Note. The average insured person's account was calculated as a ratio of NPF mandatory pension liabilities to the total number of persons insured by NPFs. The average non-state pension provision (NPP) participant's account was calculated as a ratio of NPF pension liabilities under NPP to the total number of NPP participants. The forecast NPF pension savings liabilities for 2019-2020 assumes transfer of NPF pension savings into initial individual pension capital (IPC).

The most discussed concept of the Russian pension system reform is the concept of individual pension capital (IPC).

Implementation of this concept implies that the state pension remains fully solidary, i.e. all employer pension contributions to the PFR are directed to the distribution system (solidarity of generations).

Employees will form their IPCs from a portion of their wages (in excess to pension contributions), with the size of that portion to be set at their own discretion. In return for IPC contributions, employees will receive a tax benefit in the form of a personal income tax deduction of up to 6% of their wages, while employers will also benefit as contributions (with a 1.03–1.06 surcharge rate) to the individual pension capital (IPC) system will be deducted in calculating taxable income.

See the ACRA March 28, 2017 Russian economy forecast titled ["Russian Economy: Recession Knocked Out. What Next?"](#)

State pension system reform to boost NPF assets

In 2016, NPFs saw their retirement savings exceed those kept with the PFR, with NPF-managed assets posting a 20.4% growth. In 2017-2020, NPFs are expected to further strengthen their role in the Russian pension system, while assets under their management should grow faster than pension savings in Russia as a whole – on average by 8.5% versus 5% per year respectively.

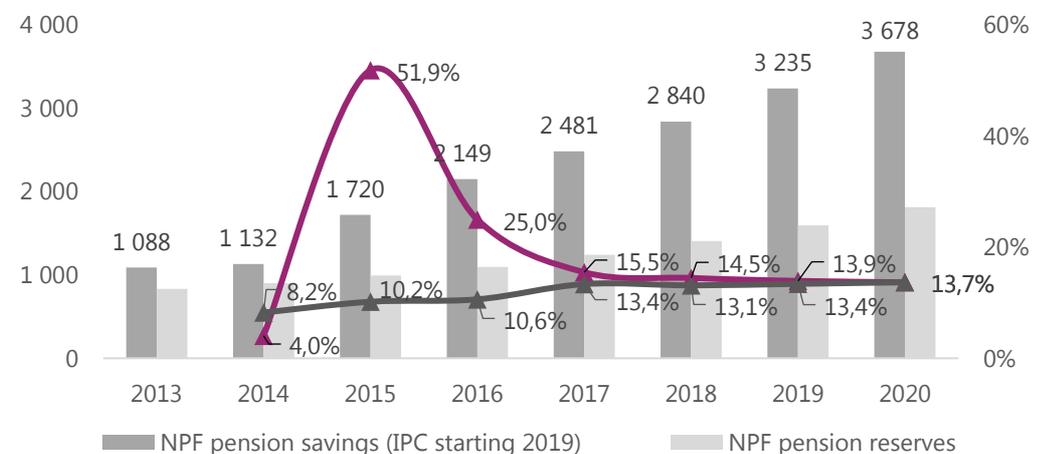

NPF asset growth is likely to be driven by the reform of the Russian pension system, which faced RUB 3 trillion of deficit in 2016. The key event for the pension sector expected after 2018 should be an introduction of the individual pension capital (IPC) system and cancellation of mandatory pension insurance (MPI) in order to reduce the need to fund the pension system from general-purpose taxes.

In 2017-2018, NPF asset growth will be hampered by the pension moratorium extension (i.e. the "freeze" of pension saving transfers from the PFR to NPFs in order to cover PFR's deficit) until 2019. Another restraint will come from consolidation of NPFs into specific groups, which will result in a decreasing number of players on the pension market and waning competition. ACRA assumes that an NPF should boast at least RUB 7-10 bln of capital to qualify for an independent market player status.

NPFs will be more attractive for customers, as the latter will learn that the new pension reform involves conversion of their funded retirement pension as the first payment into the IPC. Notably, the "undecideds", i.e. those who opt out of transferring their pension savings from the PFR to NPFs, will be randomly selected and transferred to a private fund (based on each NPF weight averaged across pension savings accrued by NPFs over the last three years), while the insured persons who hand over their savings to NPFs will remain at the selected private fund and form their initial IPCs on the basis of these savings.

The year 2018 is promising a turning point for pension reserves, as this will be a period of presidential elections, which, according to the ACRA macro forecast, are most likely to be followed by the market regulator taking unpopular measures aimed at tightening requirements for composition and structure of pension reserve portfolios, with particular regard to their credit quality.

NPF own funds will not cover the negative revaluation of pension savings and reserves

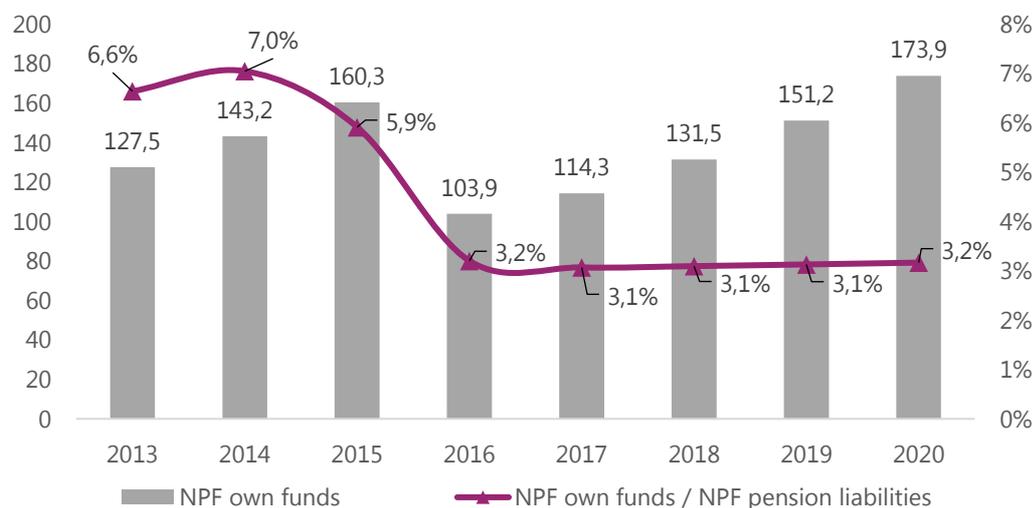

Initially, the approach to estimating NPF financial sustainability was similar to that applied to credit institutions and was based on own capital. Since then, the assessment method has undergone major changes, and now pension funds' financial stability hinges upon whether or not they boast a balanced asset structure with regard to financial risks and liabilities (pension liabilities) and accounting for actuarial risks for a five-year period (in line with the stress-testing methodology). This approach may be defined as intermediate between the Basel standard for banks and the Solvency standard for insurance companies (standards applied to regulation, risk management and supervision).

In view of the above, the Agency assumes that NPFs will not build up own funds above the regulatory requirement in 2017-2020, unless directly instructed to do so by the Bank of Russia. This will not concern NPFs, which will possess specific risk portfolios comprising mainly pension reserves, and which will not be able to prove to the Bank of Russia that they can successfully undergo stress testing in most cases. Such NPFs will be forced either to change the composition and/or structure of their pension savings/reserves portfolios, or to build up their capitalization.

An increase in MPI pension payments is expected in 2022-2027, although this timeline may move to later years via increasing the retirement age.

ACRA assumes that in 2017-2020 NPFs will see their ratio of own funds to pension liabilities at 3.1%.

Figure 2. Forecast of change in NPF own funds and the ratio of own funds to pension liabilities, RUB bln

Source: ACRA estimates

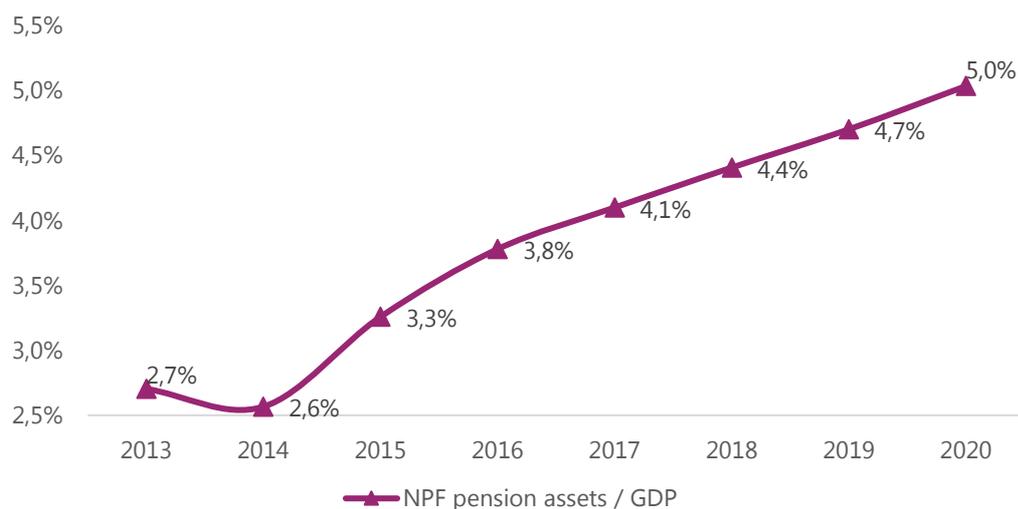

NPF pension assets to play a greater role in the Russian economy

In 2015, the pension reform introduced a new rule, which provides insured persons with a right to transfer their pension savings from one NPF to another not more frequently than once in every five years with no investment income forfeiture, while the previous rule allowed to perform such transfers every year. This change should have a positive effect on NPF customer base stability.

Thus, ACRA believes that NPF pension assets (aggregated pension savings and pension reserves) are likely to play an increasingly important role in the Russian economy, which will provide for longer duration of investments in debt instruments intended to raise financing for domestic infrastructure modernization and other social projects.

The key growth driver of MPI at NPFs will be the transition from the funded retirement pension to the IPC, which will attract the most financially savvy part of the population to non-state pension funds.

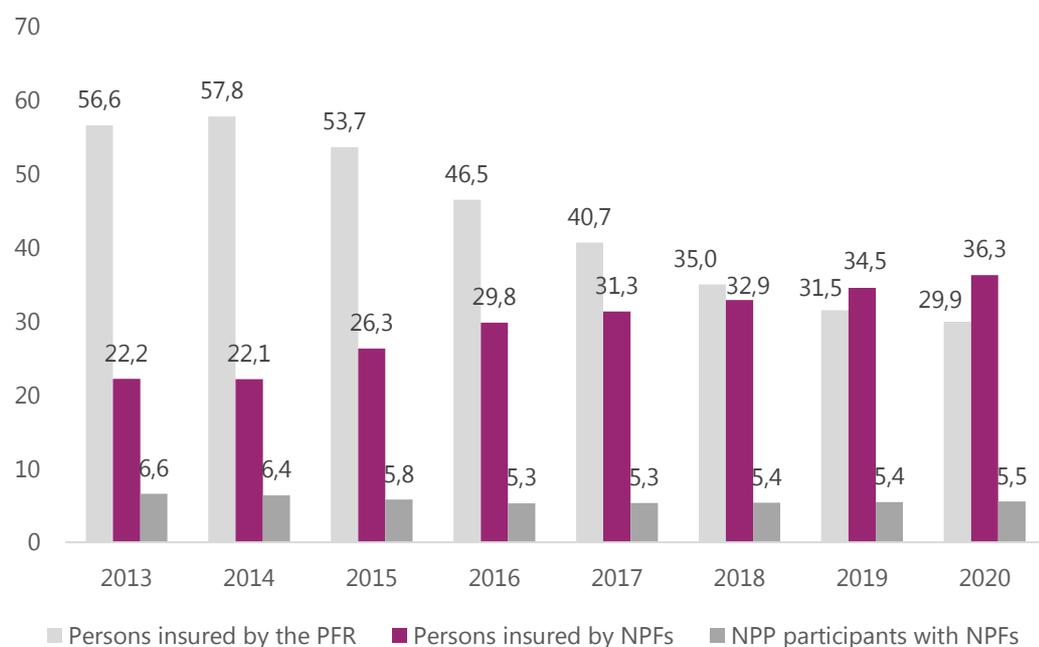

Figure 3. NPF pension assets to GDP ratio forecast

Source: ACRA estimates

By late 2019 or in 2020, ACRA expects those insured by NPFs to outnumber PFR clients.

Figure 4. Forecast of the number of insured and NPP participants, mln people

NPFs to replace bank assets with stocks and bonds

Changes to the NPF pension savings portfolio structure will be connected with the forthcoming reduction of NPF investments in the banking sector (the maximum percentage of bank assets should drop from 40% to 25% by July 1, 2018, as required by the Bank of Russia Regulation No 580-P), coupled with a decrease in other assets due to the coming into force of the Bank of Russia Ordinance No. 4060-U "On Requirements for Organization of the Non-governmental Pension Fund Risk Management System."

By ACRA's estimates, NPF pension savings investments in the banking sector totaled over RUB 900 bln as of December 31, 2015, whereas upon implementation of the No. 580-P their amount will decline to RUB 550 bln, which will translate into RUB 350 bln of pension funds outflow from the banking sector (less than 1% of Russian banking system's total liabilities).

Substitution of NPF bank deposits with stocks and government and corporate bonds may increase demand for securities issued by high-quality Russian borrowers. By ACRA's estimates, demand for Russian bonds and stocks may climb RUB 250-300 bln (1.5% of the total volume of corporate bonds on the Russian market) and RUB 50-75 bln respectively.

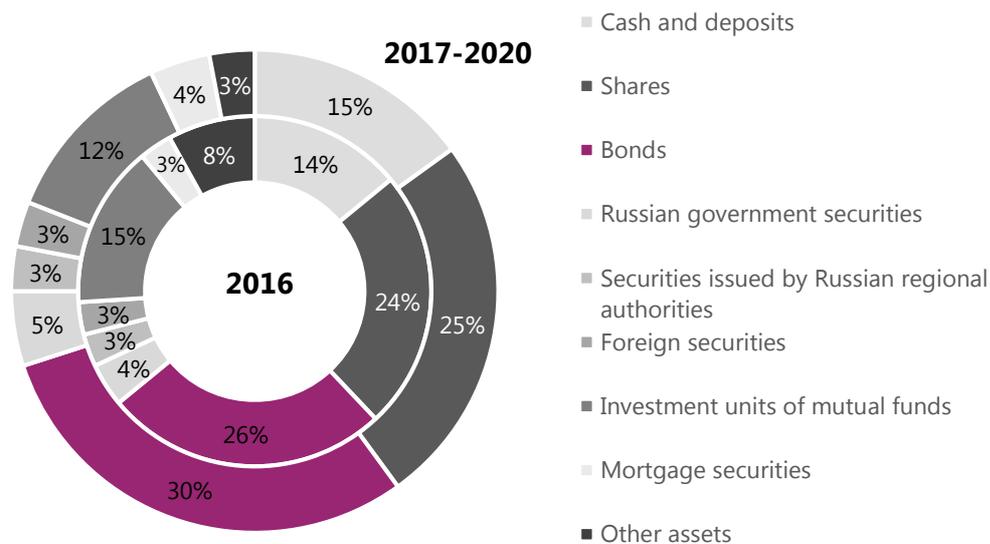

Figure 5. NPF pension savings portfolio structure change forecast for 2016 and 2017-2020

Source: ACRA estimates

The expected tightening of Bank of Russia requirements to credit quality of pension reserves will lead to a decline in the share of mutual fund investment units and other assets, and will result in an increase in the proportion of corporate bonds, including infrastructure ones. These changes will support Bank of Russia's commitment to improve credit quality of pension assets and form the portfolio structure based on prudential supervision and control principles.

Figure 6. NPF pension reserves portfolio structure change forecast for 2016 and 2019-2020

Source: ACRA estimates

Legislative changes target better risk management at NPFs and tighter control over asset credit quality

The trend towards strengthening control over pension reserves credit quality is confirmed by the NPF stress testing methodology and scenarios for NPF stress testing published on the Bank of Russia website in April 2017. According to them, the value of corporate securities suffering from heightened risk (no ratings assigned) and/or limited turnover (mutual fund units, mortgage participation certificates) will be dramatically reduced for testing purposes, which should have a negative impact on NPFs' financial sustainability.

The forthcoming Bank of Russia Regulation No 580-P will create difficulties for NPFs in terms of using such financial instruments like mutual fund units, due to differences in legislation governing NPFs and mutual funds. In fact, when using mutual fund units, NPFs will have to account for not the units per se, but their contents and appropriate limits, while the units will be managed by asset management companies. In addition, mutual fund units will feature among the 10% of high-risk assets, into which NPFs will be allowed to invest pension savings.

ACRA expects interaction problems between NPFs and asset management companies, which have and/or will have under their management pension savings, pension reserves and IPC funds. These problems are likely to stem from functioning and interaction specifics of risk management bodies at NPFs and asset management companies.

The Agency forecasts that NPFs and asset management companies will have to build up expenses to pay for qualified personnel and software in order to meet the Bank of Russia regulatory requirements for risk management systems.

Changes in legislation will further divide self-regulating organizations operating on the pension market. SROs will split into two segments: a conservative one, not interested in any major fluctuations on the pension market and willing to operate within an established paradigm, on the one hand, and an aggressive

one, advocating legislative changes aimed at liberalization (extension of the eligible instrument list, investment environment easing, etc.), on the other hand.

Analytical Credit Rating Agency (Joint-Stock Company), ACRA (JSC)

75, Sadovnicheskaya embankment, Moscow, Russia

www.acra-ratings.com

The Analytical Credit Rating Agency (ACRA) was founded in 2015, with its 27 shareholders representing major Russian corporate and financial institutions and its authorized capital exceeding RUB 3 bn. ACRA's main objective is to provide the Russian financial market with high-quality rating products. Methodologies and internal documents of ACRA are developed in compliance with the Russian legislation and with regard to global rating industry best practices.

The provided information, including, without limitation, credit and non-credit ratings, rating assessment factors, detailed credit analysis results, methodologies, models, forecasts, analytical reviews and materials, as well as other information placed on the ACRA website (further referred to as Information), coupled with the ACRA website software and other applications, are intended for information purposes only. Information must not be modified, reproduced or distributed by any means, in any way or form, either in whole, or in part, in marketing materials, as part of public relations events, in news bulletins, in commercial materials or reports without a prior written consent from, and reference to, ACRA. Any use of Information in violation of these requirements or the law is prohibited.

ACRA credit ratings reflect ACRA's opinion about the ability of a rated entity to meet its financial obligations or about the credit risk of individual financial obligations and instruments of a rated entity at the time of publication of the relevant Information.

Non-credit ratings reflect ACRA's opinion about certain non-credit risks assumed by interested parties interacting with a rated entity.

The assigned credit and non-credit ratings reflect all material information pertaining to a rated entity and known by ACRA (including the information received from third parties), the quality and reliability of which ACRA considers appropriate. ACRA shall not be responsible for the accuracy of information provided by clients or relevant third parties. ACRA does not audit or otherwise verify the provided data and shall not be held responsible for their accuracy and completeness. ACRA conducts rating analysis of information provided by customers using its own methodologies, with the texts thereof available on ACRA's website – www.acra-ratings.com/criteria.

The only source that reflects the latest Information, including the one about credit and non-credit ratings assigned by ACRA, is ACRA's official website – www.acra-ratings.com. Information is provided on an "as is" basis.

Information shall be considered by users exclusively as ACRA's statement of opinion and must not be regarded as advice, recommendation or suggestion to buy, hold or sell securities or other financial instruments of any kind, nor shall it be viewed as an offer or advertisement.

Neither ACRA, nor its employees and persons affiliated with ACRA (further referred to as the ACRA Parties) provide any direct or implied guarantee expressed in any form or by any means regarding the accuracy, timeliness, completeness or applicability of Information for making investment and other decisions. ACRA does not act as a fiduciary, auditor, investment or financial advisor. Information must be regarded solely as one of the factors affecting an investment decision or any other business decision made by any person who uses ACRA's information. It is essential that each of such persons conduct their own research and evaluation of a financial market participant, as well as an issuer and its debt obligations that may be regarded as an object of purchase, sale or possession. Users of Information shall make decisions on their own, involving their own independent advisors, if they deem it necessary.

ACRA Parties shall not be responsible for any action taken by users based on Information provided by ACRA. ACRA Parties shall under no circumstances be responsible for any direct, indirect or consequential damages or losses resulting from interpretations, conclusions, recommendations and other actions taken by third parties and directly or indirectly connected with such information.

Information provided by ACRA is valid only as of the date of preparation and publication of materials and may be amended by ACRA in the future. ACRA shall not be obliged to update, modify or supplement Information or inform anyone about such actions, unless the latter was recorded separately in a written agreement or is required by the legislation of the Russian Federation.

ACRA does not provide advisory services. ACRA may provide additional services, if this does not create a conflict of interest with rating activities.

ACRA and its employees take all reasonable measures to protect all confidential and/or material non-public information in their possession from fraud, theft, unlawful use or inadvertent disclosure. ACRA provides protection of confidential information obtained in the course of its business activities as required by the legislation of the Russian Federation.
